Php type nullable

A guy? Foo is a foo value, or null. TAKES_NULLABLE_STR function (? String \$ s): string {if (\$ s is null) {Return "default"; } Else {Return \$ s; }} Not zero is any value except null. You can use to check if a value is not zero: the takes_nullable_str2 function (string \$ s): string {if (\$ s is not zero) {Return \$ s; } Else {Return "Default"; }} This is a bit better than writing \$ s is string, as you don't need to repeat the name of the type. Not null is also useful when using generic drugs. my_filter_nulls function (
